DATA STRUCTURE AND PROGRAM DESIGN LAB – 04

4. This C program creates a linked list to store integer elements. It prompts the user to enter elements and add them to the list until the user enters 0. It then traverses the list and prints each element and "=>" until reaching the null pointer. Finally, it displays the number of nodes in the list.

SAMPLE OUTPUT:

```
Enter elements to insert into the linked list (enter 0 to stop):
10
20
30
40
50
0

Linked List: 10 => 20 => 30 => 40 => 50 => NULL

Total number of nodes = 5
```
